

This is the second in a number of Question & Answer Information Sharing emails provided by Xplor MidAtlantic Region and our sponsoring vendors. These vendors, the "Friends of MAR" have made financial commitments to support MAR and the educational and networking events we offer our members and prospective members.

Océ has a new product - the VarioPrint 6000 ULTRA. Kathy Rixham, Xplor Mid Atlantic Region member, discussed this product with Ms. Clara Murphy, Production & Copy Program Mgr. NIH, of Océ and passes along the information she received.

Q: I hear the Océ VarioPrint 6000 ULTRA is a new Océ product. Please discuss some of its features:

A: The Océ VarioPrint 6000 ULTRA features Océ Gemini Instant Duplex technology for simultaneous duplex printing in a single pass, so there is no toner waste. With no electro-photography and a low fusing temperature, the system consumes less power and produces lower ozone emissions. The versatile system can handle a wide variety of paper sizes from 8" x 8" to 12.6" x 19.2" and weights from 16-lb bond to 162-lb index.

Because no two high-volume operations are alike, the Océ VarioPrint 6000 ULTRA comes in four speeds bands: 166, 200, 250 and 306 letter duplex prints per minute.

Q: Does this printer have new features that were unavailable in the past or in other products?

A: There are several new technologies that offer speed, productivity and superior quality, but it all starts with Océ Gemini technology, which enables you to print two-sided jobs faster and more reliably because each sheet only passes through the engine once. The Océ Speed Pass program enables customers to temporarily upgrade the print speed of their Océ VarioPrint 6000 ULTRA system during busier months without making a long-term investment. In addition, Océ ScreenPoint technology delivers amazing image resolution of 1,200 x 600 dpi for halftones and photographs with automatic sheet positioning and near-perfect registration.

Q: What other features or front-end products are available to support the Océ VarioPrint 6000 ULTRA?

A: Our entire line of PRISMA production products supports the Océ VarioPrint 6000 ULTRA, including PRISMAproduction, PRISMAaccess and PRISMAprepare. PRISMAproduction's server-based system enables you to centralize and control your print processes for efficient document and variable data print production. PRISMAaccess enables fast and easy job processing by allowing job submission from those inside and outside your organization and offering customizable job tickets. PRISMAprepare allows

customers to create, correct and clean up imperfections in scanned documents; adjust a document's final layout; preview jobs onscreen and then print jobs on multiple color and black & white devices.

Q: Where can I see this system demonstrated?

A: You can experience the ultra speed of the Océ VarioPrint 6000 ULTRA on June 16 at the [Océ open house/technology seminar](#) in Alexandria, VA at 4501 Ford Ave., Suite 1100. To register for this event, email Latasha Ricks at latasha.ricks@oce.com or call her at 703-682-5282 by June 14.
